

**Eid19 is a control panel for manually switching of the Eid units.**

- Right-hand pushbutton switch selects the Eid-unit whom adress is displayed in the display above the switch.
- Two left-hand push button switches selects the port to be selected. One switch for accending and the other for decending. The selected channel or port is displayed in the led display above the switches.
- Connection to the Eid units is by a sheilded Lan-cable
- +12Vdc power is fed via the sheilded LAN connection
- Eid19 can be up to 100 meter distance from the units it is controlling.
